Per i fruttiferi la misurazione del tronco viene fatta a cm. 50 dal colletto.

Per gli alberi la circonferenza del fusto è misurata a m. 1 da terra.

Per le alberature con zolla: aumento del 30% tranne quelle già quotate.

Per le alberature a radici nude: sconto del 20%.

Per piante in contenitore si intendono le piante che non sono mai state coltivate in piena terra.

Per zolla/vaso si intendono le piante (specie, varietà e misure) provenienti da coltivazioni in piena terra e rinvasate.
